

UNDERFLOOR STOWAGE UNIT

The Underfloor Stowage Unit offers the flight crew additional stowage space in the cockpit. Now, the manuals will always be within reach of the seated crew. When not used, the manuals are kept safe, dry and clean inside the Stowage Unit. In addition, safety equipment and other items required by the flight crew can be accessed any time throughout the flight without leaving the cockpit. The Underfloor Stowage Unit is certified to be installed in the Bombardier CRJ series, Challenger and DHC-8's and can also be installed in other aircraft types.

EASY ACCESS TO MANUALS DURING FLIGHT

- Retrieve flight deck manuals while seated
- Full access when jump seat is being used
- Keep the cockpit organized
- Convenient divider allows for multiple uses of stowage unit

IMPROVED COCKPIT SECURITY

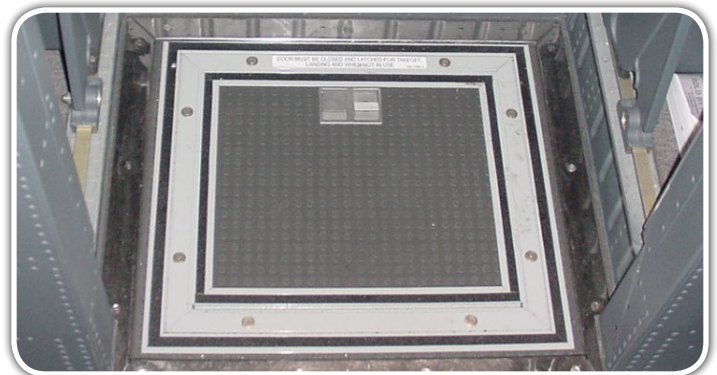

- Significantly increased storage on the flight deck without accessing the main cabin
- Stowage of personnel protective devices

REDUCE COSTS

- Decrease wear and increase life of manuals
- Drainage system keeps accumulated water off the floor and out of the stowage unit
- Quick removal for access to avionics compartment

EASY INSTALLATION

- Complete STC kit comes ready to install
- Install in a few hours with the ready to install replacement floor panel
- Stowage unit assembly can be removed and installed in a matter of seconds

FEATURES

- Quick installation and removal
- Secure, easy to open latch
- Removable divider / handle for easy removal
- Lightweight construction
- Aluminum extrusions, powder coated
- Water drainage system (CRJ)

CERTIFICATION AND APPROVALS

Transport Canada Supplemental Type Certificate
FAA Supplemental Type Certificate
EASA Supplemental Type Certificate

WEIGHT AND CAPACITY

Total weight 10.0 lbs (4.5 kg)
Stowage unit capacity 50.0 lbs (22.7kg)
